Introduction

Volume 3 of the *International Statistical Classification of Diseases and Related Health Problems* is an alphabetical index to the Tabular List of Volume 1. Although the Index reflects the provisions of the Tabular List in regard to the notes varying the assignment of a diagnostic term when it is reported with other conditions, or under particular circumstances (e.g. certain conditions complicating pregnancy), it is not possible to express all such variations in the index terms. Volume 1 should therefore be regarded as the primary coding tool. The Alphabetical Index is, however, an essential adjunct to the Tabular List, since it contains a great number of diagnostic terms that do not appear in Volume 1. The two volumes must therefore be used together.

The terms included in a category of the Tabular List are not exhaustive; they serve as examples of the content of the category or as indicators of its extent and limits. The Index, on the other hand, is intended to include most of the diagnostic terms currently in use. Nevertheless, reference should always be made back to the Tabular List and its notes, as well as to the guidelines provided in Volume 2, to ensure that the code given by the Index fits with the information provided by a particular record.

Because of its exhaustive nature, the Index inevitably includes many imprecise and undesirable terms. Since these terms are still occasionally encountered on medical records, coders need an indication of their assignment in the classification, even if this is to a rubric for residual or ill-defined conditions. The presence of a term in this volume, therefore, should not be taken as implying approval of its usage.

General arrangement of the Index

Main sections

The Alphabetical Index consists of the three sections, as follows:

Section I is the index of diseases, syndromes, pathological conditions, injuries, signs, symptoms, problems and other reasons for contact with health services, i.e. the type of information that would be recorded by a physician. It includes all terms classifiable to categories A00–T98 and Z00–Z99 except drugs and other chemical substances giving rise to poisoning or other adverse effects (these are included in Section III).

Introduction

Volume 3 of the *International Statistical Classification of Diseases and Related Health Problems* is an alphabetical index to the Tabular List of Volume 1. Although the Index reflects the provisions of the Tabular List in regard to the notes varying the assignment of a diagnostic term when it is reported with other conditions, or under particular circumstances (e.g. certain conditions complicating pregnancy), it is not possible to express all such variations in the index terms. Volume 1 should therefore be regarded as the primary coding tool. The Alphabetical Index is, however, an essential adjunct to the Tabular List, since it contains a great number of diagnostic terms that do not appear in Volume 1. The two volumes must therefore be used together.

The terms included in a category of the Tabular List are not exhaustive; they serve as examples of the content of the category or as indicators of its extent and limits. The Index, on the other hand, is intended to include most of the diagnostic terms currently in use. Nevertheless, reference should always be made back to the Tabular List and its notes, as well as to the guidelines provided in Volume 2, to ensure that the code given by the Index fits with the information provided by a particular record.

Because of its exhaustive nature, the Index inevitably includes many imprecise and undesirable terms. Since these terms are still occasionally encountered on medical records, coders need an indication of their assignment in the classification, even if this is to a rubric for residual or ill-defined conditions. The presence of a term in this volume, therefore, should not be taken as implying approval of its usage.

General arrangement of the Index

Main sections

The Alphabetical Index consists of the three sections, as follows:

Section I is the index of diseases, syndromes, pathological conditions, injuries, signs, symptoms, problems and other reasons for contact with health services, i.e. the type of information that would be recorded by a physician. It includes all terms classifiable to categories A00–T98 and Z00–Z99 except drugs and other chemical substances giving rise to poisoning or other adverse effects (these are included in Section III).

INTERNATIONAL CLASSIFICATION OF DISEASES

Section II is the index of external causes of injury. The terms included here are not medical diagnoses but descriptions of the circumstances in which the violence occurred (e.g. fire, explosion, fall, assault, collision, submersion). It includes all terms classifiable to V01–Y98, except drugs and chemicals.

Section III is the index of drugs and other chemical substances giving rise to poisoning or other adverse effects (referred to in Sections I and II as the Table of drugs and chemicals). For each substance the Table gives the Chapter XIX code for poisoning (T36–T65) and the external cause (Chapter XX) codes for accidental poisoning by and exposure to noxious substances (X40–X49), intentional self-harm (X60–X69), and poisoning, undetermined whether accidental or intentional (Y10–Y19). For drugs, medicaments and biological substances, it also gives the code for these substances causing adverse effects in therapeutic use (Y40–Y59).

Structure

To avoid unnecessary repetition, the Index is organized in the form of lead terms, which start at the extreme left of a column, and various levels of indentation, which start progressively further right. A complete index term, therefore, may be composed of several lines, sometimes quite widely separated. For example, in the entry:

Erythroblastosis (fetalis) (newborn) P55.9
– due to
– – ABO (antibodies) (incompatibility) (isoimmunization) P55.1
– – Rh (antibodies) (incompatibility) (isoimmunization) P55.0

the last line stands for "Erythroblastosis due to Rh antibodies, incompatibility or isoimmunization".

Usually, the lead term is the name of a disease or pathological condition, while the terms indented beneath it (the "modifiers") refer either to varieties of the condition, to the anatomical sites affected by it, or to circumstances that affect its coding. The coder should therefore look up the disease or condition as a lead term and then find the variety, anatomical site, etc., indented beneath it. Thus "tuberculosis of hip" is under the letter T and not under H, and stomach ulcer is under U, not under S. Only occasionally are anatomical sites indexed as the lead term. Usually, after the name of the anatomical site there will be a cross-reference to the disease, e.g. Ankle – *see condition*.

[Footnote: The name of an anatomical site appears as a lead term when it is part of the name of the disease, e.g. "abdomen, acute R10.0". This does not occur frequently in English, and in the English-language version applies mainly to Latin expressions for some conditions, e.g. "Cor biloculare".]

In some diagnostic statements, the disease condition is expressed in adjectival form. Sometimes, the index lists both forms but often only the noun form will be found and the coder must make the necessary transformation.

Among the indented modifiers, it is always feasible to include a complete listing of the various combinations of modifiers that could apply to a given term. In such circumstances, some types of modifier tend to have priority in assignment over others. For instance, under the lead term "Abscess" are indented a large number of anatomical sites and their appropriate codes. However, tuberculous abscesses are not classified to these codes but to the codes for tuberculosis of these sites. Instead of inserting an indent "tuberculous" under each anatomical site, the index uses one single indent "tuberculous – *see* Tuberculosis, abscess" under the lead term "Abscess". In general, the types of modifiers that tend to have priority in Section I are those indicating that a disease or condition is infectious or parasitic, malignant, neoplastic, psychogenic, hysterical, congenital, traumatic, complicating or affecting the management of pregnancy, childbirth or the puerperium, or affecting the fetus or newborn, or that the disease was reported in circumstances where the patient was looking for health advice but was not necessarily sick (cases in Chapter XXI). In Section II, the priority modifiers are those indicating transport accidents, complications of medical and surgical procedures, intentional self-harm, assault, legal intervention, or war operations.

Section I incorporates an index of the categories to be used with Chapter XXI [Footnote: Formerly the supplementary "V" code.]

for terms relating to problems or circumstances rather than diseases or injuries. Some special lead terms, or "key" words, are used for these, indicating the type of problem or circumstances. The main key words are "Counseling", "Examination", "History", "Observation", "Pregnancy", "Problem", "Screening", "Status", and "Vaccination".

In both Sections I and II, this key word form of lead term is also used instead of, or in addition to, the standard method for certain conditions or circumstances where terminology is diverse and reported descriptions might not easily be found in the Index, or where the normal method of indexing might be misleading. Some obstetric complications, especially the more common ones, can be found under the specific condition, e.g. Hemorrhage, complicating delivery. More often, however, the complication will be listed under "Labor", "Pregnancy", "Puerperal", or "Maternal condition affecting fetus or newborn". In Section II, key words are "Complication" (for medical or surgical procedures), "Sequelae", "Suicide", "Assault", "Legal intervention" and "War operations". Coders should remember the presence of

INTERNATIONAL CLASSIFICATION OF DISEASES

the special lists whenever they have difficulty locating index entries for the relevant conditions, problems or circumstances; by scrutinizing the indented terms, guidance can be found as to the code numbers of all the relevant categories even if not reported in precisely the same words.

Code numbers

The code numbers that follow the terms in the Index are those of the three- or four-character categories to which the terms are classified. In some cases, the fourth character is replaced by a dash, e.g. Burn, ankle (and foot) T25.—. This indicates that a fourth character exists and should be used, and that it will be found either in a note in the Index (e.g. the fourth-character subdivisions common to many sites of burns are given in a note under the lead term "Burn") or by reference to Volume 1.

When a set of fourth characters is applicable to a group of categories, the common fourth characters may be presented in a note or, in the case of pregnancies with abortive outcome, in a table in order to facilitate their application to different types of complete or incomplete abortion and to molar pregnancies. In other cases, the complication or main manifestation is listed in the Index with a cross-reference to the entire group of categories, with specification of the fourth character, e.g. Coma, diabetic – *code to* E10–E14 with fourth character .0.

Where an index term is one of the diagnostic statements for which there is a dual classification according to etiology and manifestation (see Volume 2), both codes are given, the first followed by a dagger (†) and the second by an asterisk (*), e.g. Pott's disease A18.0† M49.0*.

Multiple diagnoses

The Tabular List includes a number of categories for the classification of two or more conditions jointly reported, e.g. "Influenza with pneumonia" (J11.0), "Acute appendicitis with generalized peritonitis" (K35.2). Such combinations of conditions, which are specifically classified in the Tabular List, also appear in the Index. Classification rules for certain other combinations appear in Volume 2 in the section "Mortality: guidelines for certification and rules for coding" under the heading "Notes for use in underlying cause mortality coding", e.g. "Atherosclerosis" should not be coded when it is reported with conditions in I60–I69 (cerebrovascular diseases). These provisions, since they are not inherent in the classification itself, are not indexed.

Spelling

In order to avoid repetitions caused by the differences between American and British spelling, the American form has been used in the Index. Users familiar with the British form should remember that the first letter of the vowel combinations *ae* and *oe* and the *u* in words ending in *-our* have been dropped, and the "re" reversed to "er" in words ending thus. It is only when the initial letters are affected that any great displacement in alphabetical order is caused, and in this case, the word is usually also listed with the British spelling and a reference given to the American spelling, thus: "Oedema, oedematous – *see* Edema".

Conventions used in the Index

Parentheses

In the Index, as in the Tabular List, parentheses have a special meaning which the coder must bear in mind. A term that is followed by other terms in parentheses is classified to the given code number whether any of the terms in parentheses are reported or not. For example:

Abscess (embolic) (infective) (metastatic) (multiple) (pyogenic)
 (septic)
– brain (any part) G06.0

Brain abscess is classified to G06.0 regardless of the part of the organ affected and whether or not the abscess is described as embolic, infective, metastatic, multiple, pyogenic, or septic.

Cross-references

Some categories, particularly those subject to notes linking them with other categories, require rather complex indexing arrangements. To avoid repeating this arrangement for each of the inclusion terms involved, a cross-reference is used. This may take a number of forms, as in the following examples:

Inflammation
– bone – *see* Osteomyelitis

This indicates that the term "Inflammation, bone" is to be coded in the same way as the term "Osteomyelitis". On looking up the latter term, the coder will find listed various forms of osteomyelitis: acute, acute hematogenous, chronic, etc.

INTERNATIONAL CLASSIFICATION OF DISEASES

When a term has a number of modifiers which might be listed beneath more than one term, the cross-reference (*see also...*) is used.

Paralysis

– shaking (*see also* Parkinsonism) G20

The coder is told that if the term "shaking paralysis" is the only term on the medical record, the code number is G20, but that if any other information is present which is not found indented below, he or she should look up "Parkinsonism". There alternative codes will be found for the condition if further or otherwise qualified as, for example, due to drugs or syphilitic.

Enlargement, enlarged – *see also* Hypertrophy

If the coder does not find the site of the enlargement among the indentations beneath "Enlargement", he or she should look among the indentations beneath "Hypertrophy" where a more complete list of sites is given.

Bladder – *see* condition

Hereditary – *see* condition

As stated previously, anatomical sites and very general adjectival modifiers are not usually used as lead terms in the Index and the coder is instructed to look up the disease or injury reported on the medical record and under that term to find the site or adjectival modifier.

Abdomen, abdominal – *see also* condition

– acute R10.0

– convulsive equivalent G40.8

– muscle deficiency syndrome Q79.4

The term "acute abdomen" is coded to R10.0; "abdominal convulsive equivalent" is coded to G40.8; and "abdominal muscle deficiency syndrome" is coded to Q79.4. For other abdominal conditions, the coder should look up the disease or injury reported.

Abbreviation NEC

The letters NEC stand for "not elsewhere classified". They are added after terms classified to residual or unspecific categories and to terms in themselves ill defined as a warning that specified forms of the conditions are classified differently. If the medical record includes more precise information the coding should be modified accordingly, e.g.

Anomaly, anomalous (congenital) (unspecified type) Q89.9

– aorta (arch) NEC Q25.9

The term "anomaly of aorta" is classified to Q25.4 only if no more precise description appears on the medical record. If a more precise term, e.g. atresia of aorta, is recorded, this term should be looked up for the appropriate code.

Special signs

The following special signs will be found attached to certain code numbers or index terms:

† / * Used to designate the etiology code and the manifestation code respectively, for terms subject to dual classification. See above under "Code numbers".

/ ✧ Attached to certain terms in the list of sites under "Neoplasm" to refer the coder to Notes 2 and 3, respectively, at the start of that list.

INTERNATIONAL CLASSIFICATION OF DISEASES

Complication of abortion, current episode (O03-O06)		Complication of pregnancy with abortive outcome, subsequent episode (O08)
complete or unspecified	incomplete	

Note: The following fourth-character list is provided to be used with categories O03-O06 and O08. A distinction is made between an episode of care at which a disease or injury and resulting complications or manifestations are treated together - "current episode" - and an episode of care for complications or manifestations of diseases or injuries treated previously - "subsequent episode".

Conditions arising in the perinatal period

Note: Conditions arising in the perinatal period, even though death or morbidity occurs later, should, as far as possible, be coded to chapter XVI, which takes precedence over chapters containing codes for diseases by their anatomical site.

These exclude:

- Congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)
- Endocrine, nutritional and metabolic diseases (E00-E99)
- Injury, poisoning and certain other consequences of external causes (S00-T99)
- Neoplasms (C00-D48)
- Tetanus neonatorum (A33)
- ablatio, ablation
- - placentae, affecting fetus or newborn P02.1
- - abnormal, abnormality, abnormalities

**Cyst (colloid) (mucous) (retention)
(simple)**

Note: In general, cysts are not neoplastic and are classified either as specific entities or to the appropriate category for disease of the specified anatomical site. This generalization does not apply to certain types of cysts which are neoplastic in nature, for example dermoid, or to cysts of certain structures, for example branchial cleft, which are classified as developmental anomalies.

The following listing includes some of the most frequently reported sites of cysts as well as qualifiers that indicate the type of cyst. The qualifiers are not usually repeated under the anatomical sites. Since the code assignment for a given site may vary depending on the type of cyst, the coder should refer to the listings under the specified type of cyst before considering the site.

ALPHABETICAL INDEX TO DISEASES AND NATURE OF INJURY

| | Malignant | | | Benign | Uncertain or unknown behavior |
|-----------------------------------|--------------|--------------|--------------|--------------|-------------------------------|
| | Primary | Secondary | In situ | | |
| Neoplasm, neoplastic | C80.9 | C79.9 | D09.9 | D36.9 | D48.9 |

Note: 1. The list below gives the code numbers for neoplasms by anatomical site. For each site there are five possible code numbers according to whether the neoplasm in question is malignant (primary); malignant, secondary; in situ; benign; or of uncertain behavior or unspecified nature. The description of the neoplasm will often indicate which of the five columns is appropriate, e.g. malignant melanoma of skin, carcinoma in situ of cervix uteri, benign fibroadenoma of breast.

Where such descriptors are not present, the remainder of the Index should be consulted, where guidance is given to the appropriate columns for each morphological (histological) variety listed, e.g. Mesonephroma - *see* Neoplasm, malignant, Embryoma - *see also* Neoplasm, uncertain behavior, Bowen's disease - *see* Neoplasm, skin, in situ. However, the guidance in the Index can be overridden if one of the descriptors mentioned above is present, e.g. malignant adenoma of colon is coded to C18.9 and not to D12.6, as the adjective "malignant" overrides the Index entry "Adenoma - *see also* Neoplasm, benign".

2. Sites marked with the sign # (e.g. face NEC #) should be classified to malignant neoplasm of *skin* of these sites if the variety of neoplasm is a squamous cell carcinoma or an epidermoid carcinoma and to benign neoplasm of *skin* of these sites if the variety of neoplasm is a papilloma (any type).

3. Carcinomas and adenocarcinomas, of any type other than intraosseous or odontogenic, of sites marked with the sign ✧ (e.g. ischium ✧) should be considered as metastatic from an unspecified primary site and coded to C79.5.

fibrosarcoma, pancreas C25.9

leiomyosarcoma, stomach C16.9

Morphological types that indicate connective tissue appear in their proper place in the alphabetical index with the instruction "*see* Neoplasm, connective tissue, . . .".
